

- All-Digital IF Technology
- Frequency Range from 100 kHz up to 1 GHz
- Min. -130 dBm Displayed Average Noise Level (Typ.)
- Min. <-80 dBc/Hz @ 10 kHz Offset Phase Noise
- Level Measurement Uncertainty <1.5 dB
- 100 Hz Minimum Resolution Bandwidth
- Advanced Measurement Functions (Opt.)
- EMI Filter & Quasi-Peak Detector Kit (Opt.)
- PC Software (Opt.)
- Optional RF TX/RX Training Kit
- Optional RF Accessories (Cable, Adaptor, Attenuator ...)
- Complete Connectivity: LAN (LXI), USB Host & Device, GPIB (Opt.)
- 8 Inch WVGA (800×480) Display
- Compact Size, Light Weight Design

# DSA700 Series Spectrum Analyzer

Product Dimensions: Width × Height × Depth = 361.6 mm × 178.8 mm × 128 mm

## ► Benefits of Rigol's all digital IF design

- The ability to measure smaller signals: on the basis of this technology, the IF filter enables smaller bandwidth settings, which greatly reduce the displayed average noise level.
- The ability to distinguish between small signals by frequency: using the IF filter with the smallest bandwidth setting, it is possible to make out signals with a frequency difference of only 100 Hz.
- High precision amplitude readings: this technology almost eliminates the errors generated by filter switching, reference level uncertainty, scale distortion, as well as errors produced in the process of switching between logarithmic and linear display of amplitude when using a traditional analog IF design.
- Higher reliability: compared with traditional analog designs, the digital IF greatly reduces the complexity of the
  hardware, the system instability caused by channel aging, and the temperature sensitivity that can contribute to parts
  failure.
- High measurement speed: the use of digital IF technology improves the bandwidth precision and selectivity of the filter, minimizing the scanning time and improving the speed of the measurement.

### Features and Benefits

Distinguish the two nearby signals clearly with the 100 Hz RBW

Readout the spectrum peak values with the peak table function

Phase noise < -80 dBc/Hz @10 kHz offset

The GUI to control the RF demo kit (Transmitter) directly

Compare the spectrums with different color trace

Measure lower level signal with the preamplifier turn on

EMI kit (EMI filter & Quasi-peak & Pass/Fail)

Zero span to demodulate the AM signal

# ► RIGOL Spectrum Analyzer Option and Accessory

Advanced Measurement Kit ( AMK-DSA800 )

Rack Mount Kit (RM-DSA800)

Near Field Probe (NFP-3)

RF Demo Kit (TX1000)

RF Demo Kit (RX1000)

RF CATV Kit

DSA Utility Kit

RF Adaptor Kit

RF Attenuator Kit

RF Cable Kit (CB-NM-NM-75-L-12G) ( CB-NM-SMAM-75-L-12G)

High Power Attenuator (ATT03301H)

DSA PC Software ( Ultra Spectrum )

Soft Carrying Bag (BAG-G1)

USB to GPIB Converter (USB-GPIB)

EMI Pre-compliance Test Software (S1210 EMI Pre-compliance Software)

## Specifications

Specifications are valid under the following conditions: the instrument is within the calibration period, is stored for at least two hours at 0°C to 50°C temperature, and is warmed up for 40 minutes. Unless otherwise noted, the specifications in this manual include the measurement uncertainty.

Typical (typ.): characteristic performance, which 80 percent of the measurement results will meet at room temperature (approximately 25°C). This data is not warranted and does not include the measurement uncertainty.

**Nominal (nom.):** the expected mean or average performance or a designed attribute (such as the 50  $\Omega$  connector). This data is not warranted and is measured at room temperature (approximately  $25\,^\circ\!\!\mathbb{C}$  ).

Measured (meas.): an attribute measured during the design phase which can be compared to the expected performance, such as the amplitude drift variation with time. This data is not warranted and is measured at room temperature (approximately 25°C).

NOTE: All charts in this manual are the measurement results of multiple instruments at room temperature unless otherwise noted.

### **Frequency**
