SINEAX G536
Phase Angle or Power Factor Transducer

Carrying rail housing P13/70

*Fig. 1. Transducer SINEAX G536 in housing **P13/70** clipped onto a top-hat rail.*

Application

The transducer **SINEAX G536** (Fig. 1) measures the phase angle or power factor between current and voltage of a single or 3-phase balanced network having a sine wave form.

The output signal, in the form of a **load independent** DC current or voltage, is proportional to the phase angle resp. power factor between the 2 measured quantities current and voltage.

The transducer fulfils all the important requirements and regulations concerning electromagnetic compatibility **EMV** and **Safety** (IEC 1010 resp. EN 61 010). It was developed and is manufactured and tested in strict accordance with the **quality assurance standard** ISO 9001.

Features / Benefits

- **Measuring input: Sine, rectangular or distorted wave forms of input quantities with dominant fundamental wave**

Measured variables	Nominal input current	Nominal input voltage	Measuring range limits
Phase angle or power factor	0.5 to 6 A	10 to 690 V	Min. span 20 °el Max. span 360 °el

- **Measuring output: Unipolar, bipolar or live zero output variables**
- **Measuring principle: Measurement of the zero crossing interval**
- **AC/DC power supply / Universal**
- **Standard as with maritime execution (formerly GL, Germanischer Lloyd)**

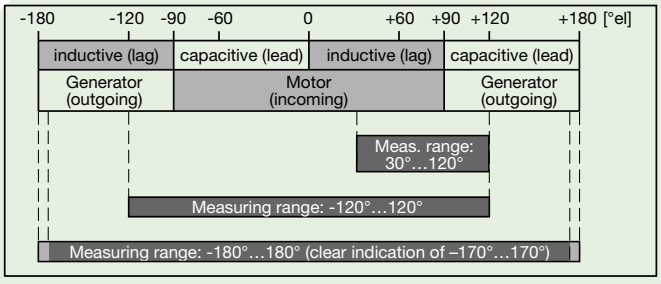
Technical data

General

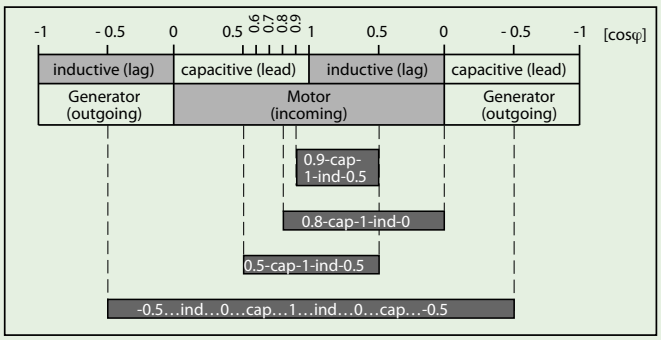
Measured quantity:	Phase angle or power factor between current and voltage
Measuring principle:	Measurement of the zero crossing interval

Measuring input

Examples of measuring ranges with φ-linear output



Examples of measuring ranges with cosφ-linear output



SINEAX G536
Phase Angle or Power Factor Transducer

Nominal frequency f_N: 16 … 400 Hz

Nominal input voltage U_N: 10 … 690 V
(max. 230 V with power supply from voltage measuring input)

Response sensitivity: 10 … 120% U_N

Nominal input current I_N: ≥ 0.5 to 6.0 A

Response sensitivity: < 1% I_N

Own consumption: < 0.1 VA per current path
U_N · 1.5 mA per voltage path

Overload capacity:

Input variables I_N .U_N	Number of applications	Duration of one application	Interval between two successive applications
1.2 x I_N	——	continuously	——
20 x I_N	10	1 s	100 s
1.2 x U_N [1]	——	continuously	——
2 x U_N [1]	10	1 s	10 s

[1] *But max. 264 V with power supply from voltage measurement*

Measuring output

Load-independent DC current: 0 … 1 to 0 … 20 mA resp. live-zero
1 … 5 to 4 … 20 mA
± 1 to ± 20 mA

Burden voltage: + 15 V, resp. – 12 V

Load-independent DC voltage: 0 … 1 to 0 … 10 V resp. live-zero
0.2 … 1 to 2 … 10 V
± 1 to ± 10 V

Load capacity: Max. 4 mA

Voltage limit under $R_{ext} = \infty$: ≤ 25 V

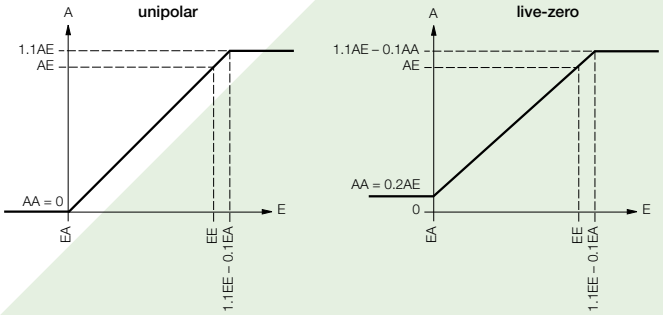
Current limit under overload: Approx. 30 mA

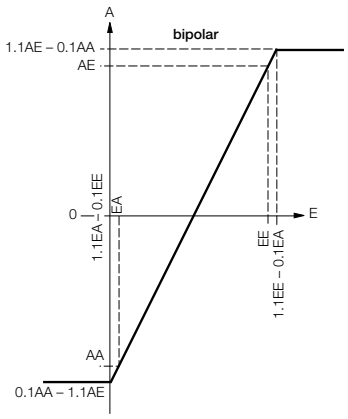
Residual ripple in output current: < 0.5% p.p.

Nominal value of response time: 4 periods of the nominal frequency

Other ranges: 2, 8 or 16 periods of the nominal frequency

Output characteristic





Legend:
E = Input
EA = Input start value
EE = Input end value
A = Output
AA = Output start value
AE = Output end value

Accuracy (acc. to EN 60 688)

Reference value: Output span

Basic accuracy: Class 0.5

Reference conditions

Ambient temperature: 15 … 30 °C

Input current: 0.8 … 1.2 I_N

Input voltage: 0.8 … 1.2 U_N

Frequency: f_N ± 10%

Wave forms: Sine wave

Power supply: At nominal range

Output burden: Δ R_{ext} max.

Additional errors (maxima):

Voltage influence between 0.5 and 1.5 U_N: ± 0.3%

Current influence
between 0.4 and 1.5 I_N: ± 0.3%
between 0.1 and 1.5 I_N: ± 0.5%

Safety

Protection class: II (protection isolated, EN 61 010)

Housing protection: IP 40, housing
(test wire, EN 60 529)
IP 20, terminals
(test finger, EN 60 529)

Contamination level: 2

Overvoltage category: III

Rated insulation voltage (against earth): 230 V resp. 400 V, inputs
230 V, power supply
40 V, output

Test voltage: 50 Hz, 1 min. acc. to EN 61 010-1
3700 resp. 5550 V, inputs versus all other circuits as well as outer surface

Test voltage (continuation):
3250 V, input U versus input I
3700 V, power supply versus output as well as outer surface
490 V, output versus outer surface

Power supply →○

AC/DC power pack (DC or 50/60 Hz)

Table 1: Rated voltages and permissible variations

Rated voltage	Tolerance
85 … 230 V DC, AC	DC – 15 … + 33% AC ± 15%
24 … 60 V DC, AC	

or

Power supply from voltage measuring input: 24…60 V AC or 85…230 V AC

Option: Connect to the low tension to terminals 12 and 13
24 V AC or 24 … 60 V DC

Power consumption: 3 VA

Installation data

Mechanical design: Housing **P13/70**

Material of housing: Lexan 940 (polycarbonate), flammability Class V-0 acc. to UL 94, self-extinguishing, non-dripping, free of halogen

Mounting: For rail mounting

Mounting position: Any

Weight: Approx. 0.24 kg

Connecting terminals

Connection element: Screw-type terminals with indirect wire pressure

Permissible cross section of the connection leads: ≤ 4.0 mm² single wire or
2 x 2.5 mm² fine wire

Environmental conditions

Operating temperature: – 10 to + 55 °C

Storage temperature: – 40 to + 70 °C

Relative humidity: ≤ 75%, no dew

Altitude: 2000 m max.

Indoor use statement!

Ambient tests

EN 60 068-2-6: Vibration

Acceleration: ± 2 g

Frequency range: 10 … 150 … 10 Hz, rate of frequency sweep: 1 octave/minute

Number of cycles: 10, in each of the three axes

EN 60 068-2-27: Shock

Acceleration: 3 ×50
3 shocks each in 6 directions

EN 60 068-2-1/-2/-3: Cold, dry heat, damp heat

IEC 1000-4-2/-3/-4/-5/-6
EN 55 011: Electromagnetic compatibility

Maritime product features (formerly GL, Germanischer Lloyd)

Type approval certificate: No. 12 261-98 HH

Ambient category: C

Vibration: 0.7 g
