

## SIRAX CT3xx Split-Core Current Transformer

### Description

Thanks to their compact design, simple installation and splittable core halves, split-core current transformers are ideal for use in hard-to-reach and limited space applications. Anywhere where an interruption of the current path is problematic or a measuring instrument has to be retrofitted, split-core current transformers are the right choice. They convert primary rated currents into secondary, rated currents of 5 A or 1 A, which can be used by measuring systems.

### Properties

- Burst-resistant plastic housing made from polycarbonate
- Hardly inflammable and self-extinguishing according to UL94 V0
- Manipulation protection of the connections by means of sealable covers
- Lock protection prevents accidental opening
- Use in difficult to reach places with limited space requirement
- Easy and quick assembly thanks to the splittable core halves
- Ideal for retrofitting in existing systems without interrupting the power supply
- Various mounting options such as wall, cable or busbar mounting

### Application

Application possibilities for split core current transformers can be found in almost all market segments and sectors. Wherever an adaptation of the primary measured variable to the input nominal size of the connected measuring devices is necessary. They are ideal for retrofitting in existing systems.
